I'm a **frontend dev** with enough **backend knowledge** to run something not that complicated as well. My main programming language is **Flutter/Dart**, but I'm also very comfortable with **TypeScript + HTML/CSS** or **React + Redux**. In fact I actually would rather work with a frameworkless TS project, such as the one I did for my Go (Board Game) Ranking simple project (see the other projects section below). I also know a fair bit of Firebase and NoSQL.

WORK EXPERIENCE
